

# Build a medical appointment booking website using ReactJS and NodeJS

Nguyễn Chí Dũng

## INTRODUCTION

In the era of fast technological progress, the need for health care is becoming more and more necessary. This project aims to solve this necessity by developing a comprehensive web application designed specifically for an appointment schedule. This application will provide information on the doctor with the examination schedule, medical facility information with the same specialty. Help patients can schedule online, reduce time and effort.

## MATERIALS AND METHOD

Frontend

HTML

CSS

JS

B

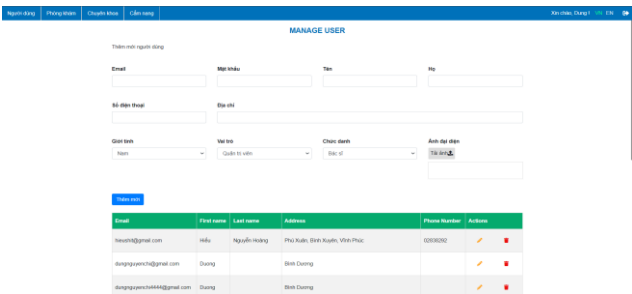

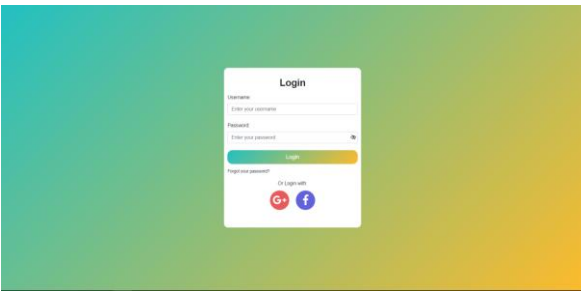

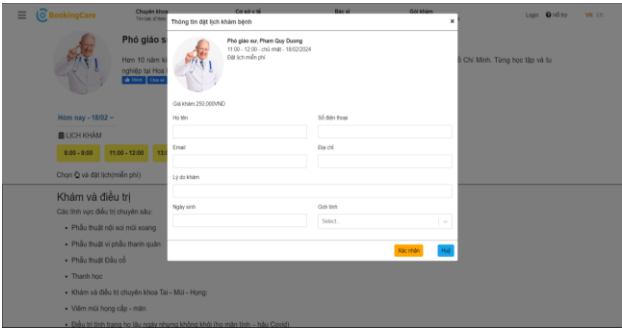

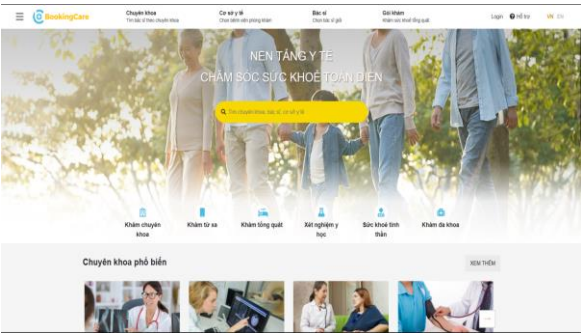

Backend

node

JS

MySQL

## RESULTS

## CONCLUSION

In today's medical field, a web application scheduling for a vision is an essential tool. Develop an effective, flexible and user -friendly platform to enable users to take care and protect their health quickly and conveniently. This optimizes the doctor's medical examination and treatment process for patients, reducing many unnecessary procedures.
